

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

mal husbandry. A new college circular describing this course will be ready for distribution about the middle of August.

SAMUEL L. BOOTHROYD, assistant professor of topographic and geodetic engineering in the College of Civil Engineering of Cornell University, has resigned to accept the associate professorship of astronomy and mathematics in the University of Washington, succeeding Professor James E. Gould. The trustees have promoted Paul Halladay Underwood, instructor in the college, to the rank of assistant professor and appointed him to the place vacated by Professor Boothroyd. The following appointments have also been made: Ransom E. Somers, instructor in economic geology; E. H. Kennard and T. B. Brown, assistants in physics, and R. A. Gulick, assistant in chemistry.

H. N. PARKER, of the Illinois Experiment Station, will head the division of sanitary dairying of the university next year. Professor B. R. Rickards will enter the employ of an Indianapolis manufacturing firm.

DR. ARTHUR E. HILL, of New York University, has been appointed professor of chemistry and director of the laboratory to succeed Professor Lamb.

GEORGE R. WELLS, Ph.D. (Hopkins, '12), has been appointed instructor in psychology at Oberlin College.

L. R. GEISSLER, Ph.D. (Cornell), has resigned his position as research psychologist in the Physical Laboratory of the National Electric Lamp Association, Cleveland, to become professor of psychology at the University of Georgia. He will organize and direct the new psychological laboratory to be established in connection with the School of Education. The laboratory will occupy seven or eight rooms in George Peabody Hall, the new home of the School of Education now under construction, and will be furnished with all modern equipment.

WILLIAM E. BARROWS, JR., has been appointed professor of electrical engineering at the University of Maine. For the past six

years he has been assistant professor of electrical engineering at the Armour Institute of Technology.

DR. W. H. WARREN, connected during the past year with the department of chemistry of Clark College, has recently been appointed professor of chemistry in Wheaton College, Norton, Massachusetts.

PROFESSOR CHARLES E. DECKER, M.S. (Chicago), has been appointed assistant professor of geology and biology at Allegheny College.

DR. FRANK ELBERT WHELOCK, instructor in physics in the University of Missouri, has been appointed professor of physics in Mount Allison College, Sackville, New Brunswick.

THE following appointments have been made in consequence of the new grant in the University of London made by the London County Council for the increase of the university professoriate: Dr. J. A. Fleming, D.Sc., F.R.S., professor of electrical engineering (to teach at University College); Dr. Arthur Dendy, D.Sc., F.R.S., professor of zoology (to teach at King's College).

PROFESSOR V. BJERKNES, of the University of Christiania, has been offered the chair of geophysics at Leipzig.

DR. JEAN BRUNHES, professor at Lausanne and Freiburg, has been called to the chair of anthropogeography in the Collège de France.

DISCUSSION AND CORRESPONDENCE

"GENES" NOT MADE IN GERMANY

TO THE EDITOR OF SCIENCE: The new version of "genes" in the issue of May 24 carries a reminder of Mark Twain's "jumping frog." Darwin's word *pangen* is taken into German to alter the vowel quantity and then comes back into English accompanied by a superfluous letter and a new system of philology elaborated to justify the "genes" and "pan-genes" that adorn the pages of recent publications on genetics.

The custom has been to use Latin transliterations of Greek derivatives, but scientific literature is now to have a more Teutonic flavor. The new system need not be confined

to genetics, of course, nor even to biology. The same reasons can be urged for oxygene as for pangene. Scores of terms have been based on the same root, $\gamma\epsilon\iota\nu$, but hitherto with a short vowel, as in the Greek. Some philologists add a letter in forming such a word as clone, where the original Greek vowel is long, but this has nothing to do with Dr. Shull's "general law of English philology" that would lengthen short vowels to enable Greek derivatives to be pronounced with a German accent. In this case Johannsen's correct word "gen" was displaced by a linguistic monstrosity, "gene," because the latter was supposed to sound more like German, and because "the German word '*Pangen*' better expresses the meaning involved than does the English word 'pangen.'" The new final "e" symbolizes the magically improved connotation acquired by Darwin's word pangen in passing from English into the hallowed precincts of the German language. It replaces the italics, capitals and quotation marks otherwise required to differentiate the more expressive German "*Pangen*" from the ordinary English "pangen." The mistake, as now appears, was not a merely casual adoption of the German plural "*Gene*" as an English singular, but a deliberate substitution of an erroneous new singular "gene," anomalous alike in German, Greek or English. Dr. Shull does not state when, where or by whom this change from "gen" into "gene" was determined, but these details are of no importance now that the method has been explained. It would have been easier to bestow "gene" and "pangene" on the French, who use "*oxygène*" and a whole class of similar terms, but the German derivation is more ingenious.

Regarding the phenotypes, little need be said. Dr. Shull reasserts the reality of phenotypes, and even insists with italics that "statistical investigation may *discover, measure and describe* phenotypes." But if it be true that "phenotypes and genotypes exist among Mendelian hybrids," or elsewhere in nature, they must be the names of classes or groups of animal or plant individuals distin-

guished by the possession of certain characters or gens. Such group names are usually considered as collectives, but Dr. Shull maintains that phenotypes "must always be abstractions." Evidently the new science of genetics is to have an original system of metaphysics as well as of philology.

PROPOSITIONS FOR CHANGES IN THE INTERNATIONAL CODE OF ZOOLOGICAL NOMENCLATURE

ATTENTION of zoologists is invited to the rule that all propositions for changes to the International Code must be in the hands of the Commission at least one year before the meeting of the International Congress.

Formal notice of the exact date of meeting has not yet reached me, but I hope to have my first report to the Commission prepared for mailing not later than September 1. About that date I shall also send to SCIENCE and to the *Zoologischer Anzeiger* a complete list of the propositions that have been sent to me.

It is a great satisfaction to the Commission to note the increased and more general interest exhibited by zoologists in nomenclatorial matters, and I take the liberty of repeating a statement made on several former occasions, namely, that the Commission welcomes most heartily correspondence and suggestions from all zoologists.

C. W. STILES,
*Secretary, International Commission
on Zoological Nomenclature*

THE PEI YANG UNIVERSITY

TO THE EDITOR OF SCIENCE: A note by Consul General S. S. Knabenshue, of Tientsin, China, regarding vacancies in the staff of the Pei Yang University, of that city, published in *Daily Consular and Trade Reports* of July 8, seems likely to deluge me with inquiries and applications, and I would be glad if you would aid me in forestalling them by publishing this statement. There are no vacancies in the staff of the Pei Yang University at
